INTRODUCTION

Why Customer Experience is more important than ever

Throughout the pandemic, people inevitably needed to engage with organisations far more than normally. And that was a challenge – both for the millions of customers needing to make contact and for the many contact centre teams who worked hard to keep pace with exceptional levels of demand.

From a customer experience perspective, the results were mixed. Many organisations stepped up – recognising the vital role being played by contact centres and digital engagement channels during the initial lockdown and rapid transition to home working. However, others found it difficult to keep pace, perhaps not appreciating the levels of transformation and acceleration needed to simply keep up with customer demands.

A defining characteristic for those organisations getting it right is that they increasingly value customer service and see it as a differentiator. For these organisations, every interaction is an opportunity to deliver incremental value to customers – and also to re-inforce their brand message.

They also recognise that this isn't easy, particularly when they're dealing with potentially millions of interactions a year in what is now a digital first world.

Delivering a high-quality customer experience at scale that's consistent across both digital and physical engagement channels is always going to be challenging – especially if you're still relying on inflexible infrastructures.

At Sabio we believe that customer experience should be brilliant. Every time someone engages with your business they are going on a journey, and we work closely with organisations to make sure that journey is great every time.

That's why transforming traditional customer engagement is increasingly top of the agenda for organisations of all sizes, with more and more brands acknowledging the need to optimise the experience offered and increase customer intimacy.

In this eBook we set out why CX is so important and highlight how building the right customer experience strategy and applying an optimum mix of innovative technologies is essential to securing CX success.

2020 more than any other year, placed a critical spotlight on the customer service function.

WHAT IS CUSTOMER EXPERIENCE?

Customer experience is vital to the success of businesses of all sizes. But what exactly is it that combines to create the customer experience? And how does it impact your business?

Put simply, customer experience – often shortened to ‘CX’ – is the sum of how customers perceive your brand after one or many interactions. Of course, outcomes are important - but CX is about more than that. A great experience should help to create an emotional connection with your customers – not just when things go well but also potentially when an interaction doesn’t have a positive outcome. In the end, how a customer is treated and how they feel about the experience can be as important as the initial interaction result.

Multiple CX components combine to contribute to an overall customer experience. If just one goes wrong - or falls short of customer expectations

- it can quickly undo any positive interactions that came before. For example, it’s easy to forget how quick and easy it was to buy that book online if the wrong one is delivered, or if a product is damaged and needs to be returned. Key CX elements include:

WEBSITE

Should be easy to navigate and work well on mobile devices. Also is it up-to-date with all the latest stock details, opening times and contact details?

STOCK CONTROL

Do you have products in stock or is there likely to be a delay.

CONTACT CENTRE

Long wait times can be frustrating, but when customers do get through to an agent they expect them to be polite, friendly, easy-to-hear and informed.

CHATBOTS AND LIVE CHAT

The best chatbots and virtual assistants answer customer queries well and can cut enquiries into a contact centre by 30%. But poorly-designed bots can have the opposite effect, confusing customers and either driving them to voice, give up or shop elsewhere.

SOCIAL MEDIA CHANNELS

Are they up-to-date, in line with brand values and tone of voice – and also monitored frequently? Things move fast online, so it’s important that customer queries are answered in a timely way.

DELIVERIES

Once customers have made a purchase, they want products to be delivered safely and on time. Do you have your own delivery/installation teams? Are they trained to answer customer queries and resolve issues?

MARKETING AND ADVERTISING

This always needs to be on brand and promise only what can be delivered.

IMPROVING THE CUSTOMER EXPERIENCE

For any business to improve the overall customer experience, it’s important to focus on the things that matter most. You need to ask your customers what they think, and what they actually want. Many organisations believe they already know, but - as we saw in 2020 – things can change remarkably quickly. For many businesses to survive and meet customer demand, they had to adapt their business model, working practices and CX almost overnight.

A great customer experience should create an emotional connection with your audience. You’ll never achieve this if you don’t take the time to understand what matters most to them.

WHY CX IS CORE TO BUSINESS SUCCESS

CX is at the forefront of your brand identity. Customers remember their experiences, good and bad, and carry them forward.

Poor experiences typically encourage detractors who speak negatively to others. Conversely, positive experiences help customers to become advocates who not only feel positive but will also be more likely to recommend.

Word of mouth is powerful. Damage the reputation of your company via poor CX and you'll harm your bottom line. Salesforce research backs this up, with 55% of respondents reporting that they have taken their business to a competitor due to unsatisfactory customer service. At the same time, 67% would pay more for a better customer experience. Deliver great CX and you'll encourage your customer loyalty.

For any business, CX can prove a key differentiator – often as important as the product or service offered itself. However, it can't remain static and needs to evolve as organisations adapt their operational business models, product offers and working practices. That was particularly the case when organisations were managing CX strategies through the pandemic – understanding new demand levels, maximising their capacity to respond and managing contact volumes.

Those organisations already tuned in to a more fluid CX approach were able to respond more flexibly in 2020. For example, driving digital adoption and running RPA on back-office processes would have enabled a significantly lower cost to serve through a more challenging business phase.

Similarly, those teams that invested in ongoing CX optimisation, fine-tuning their customer journeys and making engagement as frictionless as possible for people benefited through increased CSAT and NPS scores and increased loyalty.

Developing a customer experience (CX) strategy for your business has never been more important. Whether you have a large contact centre or teams in various locations, businesses will find it harder to grow without one in place. And it's a process that should be continuous – removing complexity, making things simpler for customers and flexibly responding to change.

The good news is that the benefits of prioritising CX outweigh the initial cost of establishing effective solutions.

As well as retaining customers, you will also benefit financially from a new generation of digital processes, automation and business insights that will combine to take customer experience to places that it simply couldn't achieve before.

Word of mouth is powerful. Damage the reputation of your company via poor CX and you'll harm your bottom line.

67% WOULD PAY MORE FOR A BETTER CUSTOMER EXPERIENCE.

55% TAKEN BUSINESS TO A COMPETITOR DUE TO UNSATISFACTORY CUSTOMER SERVICE.

CX IN ACTION - STAYING CONNECTED AT BGL

BGL Group, one of the largest personal insurance groups in the UK, has had to adapt like many other organisations to today's changing working environment. The adjustment was a great challenge, but also a real opportunity.

Dataset of customer intents allowed calls to be redirected to the right place to better serve customers

This inevitably brought new levels of uncertainty surrounding consumer expectations, so for BGL the focus had to be on agility, prioritisation, quality decision making, clarity of objective, and having a certainty of purpose.

BGL has been working hard on its digital transformation programme over the last couple of years and has been recognised across a range of forums for the work it does around online CX.

Customer priorities for digital are fed through from front-line colleagues in the contact centre, and the digital team works closely with the contact centre to understand what self-serve functionalities and capabilities are a priority.

Deploying a Virtual Assistant has been a big win for BGL, as well as live chat where using the experience of contact centre employees has helped to shape how interactions can be escalated effectively to offer a true cross-channel experience.

BGL is also leveraging new technology and digital approaches to help provide an exceptional customer experience.

The company moved to cloud-based telephony in just eight days, ensuring the team was available to answer calls and questions at the start of the pandemic.

Looking forward, the technology team is also using this platform to design conversational-type customer experiences, either through the voice channel or online, to create a hybrid system that brings together the best of both.

The transition towards remote working for contact centres has also opened up contact centre roles to whole new talent pools. Remote working offers greater flexibility, meaning that contact centres are no longer limited to local recruits, but with the CX focus of course remaining centred on the human element.

“

Our focus is on providing customers with the ability to self serve when it's the best option for them and for our business. This allows our contact centre team to spend more time on conversations that require a human touch.

Barry Webb, BGL Group

WHAT MAKES A GREAT CUSTOMER EXPERIENCE?

There are three key elements that combine to define brilliant CX: **Emotional response, Ease and Efficiency.**

CUSTOMER EXPERIENCE SHOULD ELICIT AN EMOTIONAL RESPONSE

Emotions are at the heart of any successful CX approach, acknowledging how the customer feels, validating feelings and partnering to reach a resolution. Responses also need to adapt – helping a customer book a holiday, for example, needs to be treated differently to assisting someone in resolving a difficult insurance claim.

CUSTOMER EXPERIENCE SHOULD BE EASY

Great CX should be low-effort for the customer, with easy experiences making it simple for customers to seek help, make contact and resolve issues. They want things to be fast and convenient regardless of the channel they're using. People will also compare your service with the experiences offered by other service providers that they use - so there's never any room for complacency.

CUSTOMER EXPERIENCE SHOULD BE EFFICIENT AT SOLVING PROBLEMS

Resolution is critical. Effective CX needs to leave the customer feeling satisfied that their issue is resolved. People shouldn't need to call back or go online again because the initial solution was poor or only effective in the short-term. Services have to be set-up to resolve customer queries, and customers always need to be asked whether their issue has been solved. If not, it's important to offer an alternative means of support at that same stage.

Delivering this kind of customer experience consistently - and at scale - is always going to be challenging. Here are five tips that can help kickstart your customer experience transformation:

1 STOP WORKING IN SILOS

It's easy to understand why silos develop across a business, but every department – from marketing and product development to customer services and front-of-house staff – should have access to the customer intelligence gathered from customer engagement. Until this happens, the business is missing out on critical information – making it much harder to deliver a truly joined-up customer experience.

4 SUPPORT YOUR STAFF WITH THE RIGHT TECHNOLOGY AND INFORMATION

With most contact centre staff working from home at some stage, it's important that they feel supported and empowered to do their best – regardless of where they are working from. While customers may have been more forgiving in the early stages of the 2020 pandemic, that's no longer going to be the case. Every contact centre needs to have access to the right information to give customers a consistent, positive experience.

2 DON'T LET YOUR DATA GATHER DUST

Don't let your data gather dust – Whether it's Voice of the Customer, Voice of the Employee, sales figures, web analytics, virtual assistant interactions or social media queries, businesses will never run out of valuable CX insight. However, you've got to understand this data and put it to work quickly if you're going to build a great customer experience.

5 TURN NEGATIVES INTO POSITIVES

Every error, issue or mistake is an opportunity to turn a customer into a brand advocate. If you can resolve the problem and leave that customer feeling pleasantly surprised or even delighted, then they will tell their friends and are likely to remain loyal to your brand. Sometimes it takes a bad customer experience to make a great customer experience.

3 TALK TO EVERYONE AND STAY CLOSE TO THE ACTION

Managers often think they know what great customer experience means for their business, but too many are just guessing or are simply out-of-touch. That's why you need to stay close to customers – sit in the contact centre, listen to conversations, maybe even answer a few customer calls yourself. First-hand experience, listening to contact centre staff and surveying customers are all powerful ways of establishing what constitutes great CX at your business.

BUILDING AN EXCELLENT CUSTOMER EXPERIENCE AT HOMESERVE

HomeServe is one of the UK's leading home assistance providers. Almost two million UK customers – and nearly eight million worldwide – place their trust in HomeServe when it comes to fixing, maintaining and looking after their home.

Delivering exceptional customer services drives everything that HomeServe does, from the products and service it offers to the operation of its processes and policies. The company focuses on creating an environment that empowers employees who want to serve and help their customers. The combination of excellent employees and innovative technologies means that HomeServe can take on new opportunities and challenges, work faster and more efficiently, while continuing to provide the excellent customer experience they are known for.

According to HomeServe: the investment we make in developing a customer first culture and empowering our staff to do the right thing for our members pays dividends. The customer is at the heart of the business, and HomeServe invests heavily in customer research to ensure their services offer real homeowner concerns. Two key initiatives make a real difference here: HomeServe Now, the company's app-based technology, and the company's Effortless 2020 strategy that focuses on making things easier for the customer.

HomeServe Now can swiftly identify a customer's need and connect them directly with an available engineer near their home. This initiative has the potential to transform customer service and reduce cost to serve. By combining the App with a subscription-based consumer offer, there is

also an opportunity to engage homeowners that typically would not consider the core Membership product but who frequently buy other products and services on mobile devices and via a subscription.

HomeServe's Effortless 2020 strategy is all about making it easier for the customer.

Part of this strategy involves an initiative called Customer First, which is a program where anyone in the company can submit an idea, offer feedback and seek additional support to help vulnerable customers. Those suggestions then go to a daily panel of people from across HomeServe who decide whether they will act on that idea or not. This program has had a huge and positive response, with HomeServe able to make significant changes for their customers because of employees' input.

The investment we make in developing a customer first culture and empowering our staff to do the right thing for our members pays dividends.

BUILDING THE RIGHT CX STRATEGY

A customer experience strategy is vital to help businesses navigate both the good times and the bad. It's your plan of action to help you focus on your priorities and deal with issues when they arise.

Before you build your CX strategy you need to ask yourself some questions – particularly around those crunch points or issues that present opportunities for your organisation to deliver a better customer experience. Key questions here would include:

WHAT IS THIS ISSUE A SYMPTOM OF?

WHAT IS THE PROBLEM THAT NEEDS TO BE SOLVED?

WHAT ARE THE CX END GOALS THAT YOU'RE LOOKING TO ACHIEVE?

WHAT ARE YOUR CX PRIORITIES?

WHAT DO YOU NEED TO STOP, START OR CONTINUE IN ORDER TO REACH YOUR GOALS?

Think about your business today. Where are you right now in terms of your CX? Perhaps you are looking for ways to improve your customer experience and your NPS and CSAT scores. Maybe you need to look at making cost savings. Alternatively, you might be seeking ways to find a better balance between the two. Whatever you're trying to achieve, your customer experience strategy should focus on ways to help you meet your objectives

If you're frustrated with your current technology and believe it's time for a change, don't immediately jump ahead to seek out the next piece of technology that looks like it might help. Instead think about the outcomes you want, then focus in on the technology, data insight and digital solutions that will enable you to achieve those outcomes.

Think about the context. What changes have you seen in your customers' behaviour or among your competitors recently? For example, the pandemic triggered a rapid shake-up of the traditional channel mix. Customers of all ages turned to online solutions such as web chat and social media during lockdown. If you've seen something similar, your strategy should include plans to strengthen your capabilities in these areas and increase ways for customers to resolve issues through automation.

As well as thinking about ideal solutions, consider how your strategy can help when things don't go to plan. What does the business do when things fail? What will you change if plans go wrong? Many businesses are aiming for full automation as the low-cost, convenient CX solution. But what if you can't automate everything first time? How will you ensure that empathy and warmth are still part of your customer experience in an automated future?

Remember, your customer experience strategy is all about making your customers happy. So, it's important to check-in with them and find out what they want and need before you work on your strategy. There are various ways of doing this, including primary research, customer surveys, your NPS scores as well as customer sentiment from speech and text analytics. Also don't forget to work closely with your contact centre agents as they are a rich source of insight into any barriers, issues and where you're winning when it comes technology, working practices and supporting customers.

UNLOCKING THE VALUE OF A CUSTOMISABLE CONTACT CENTRE

A customer experience strategy is vital to help businesses navigate both the good times and the bad. It's your plan of action to help you focus on your priorities and deal with issues when they arise.

“ Covid-19 has changed peoples' need for communication. Suddenly, customers need a lot more reassurance, consumer comfort and interaction.

loveholidays is the fastest growing online travel agent and sees itself as a technology company that is in the travel industry. With a booking platform that helps customers find holidays that are specifically tailored to their wants and needs, loveholidays has introduced a configurable contact centre that works effortlessly to create a more personalised service for customers.

When the Covid-19 pandemic hit, loveholidays had to quickly reinvent its operations. The initial lockdown had a huge impact on contact volumes, with the customer contact team having to carry out the equivalent of 12 years of refunds, alterations and amendments within just four months.

According to loveholidays' Director of CX Engineering and Business IT Eugene Neale, "Covid-19 has changed peoples' need for communication. Suddenly, customers need a lot more reassurance, consumer comfort and interaction. I don't think this will go away. We have found that having more proactive and increased communication has enabled a better customer journey and experience. It's allowing us to put the heart back into online engagement."

By adopting an agile approach, loveholidays' configurable contact centre platform is much more reactive – generating hundreds of events for agents that enable the team to be personal and effortless when dealing with customers.

A customer experience centre at the heart of the business

Recognising that the travel industry will keep on changing, loveholidays has assembled a team of telco engineers, software engineers and contact centre specialists who work together on refining the company's CX proposition. According to Eugene: "we're able to work on rapid prototypes in an agile manner, meaning we can try out our ideas in hours and quickly find the ones that work."

loveholidays is already working on a mobile application that ties directly into the contact centre. And by integrating with the configurable contact centre platform, loveholidays can reinvent, redefine, reshape and realign everything very quickly and easily. Whatever happens, loveholidays knows it can build solutions that make the customer experience as good as it can be – with every interaction powered by the same processes that drive the contact centre. This effectively creates a true CX engine that can drive business decisions and respond effectively.

“ We're able to work on rapid prototypes in an agile manner, meaning we can try out our ideas in hours and quickly find the ones that work.

SABIO CX INSIGHTS

5 key drivers for CX acceleration

Sabio focuses on helping clients to create and deliver brilliant customer experiences across their digital and contact centre channels. Key to this is helping organisations access the benefits available from technology. Five transformative, cutting edge technologies that will help secure competitive differentiation are:

- 1 DIGITAL FIRST
- 2 ACCELERATED CLOUD ADOPTION
- 3 DATA POWERING DIFFERENTIATION
- 4 AI AND AUTOMATION
- 5 CHANGING ROLES FOR ADVISORS

1 DIGITAL FIRST

Most brands recognise that the majority of interactions now start with some form of digital customer engagement, so there needs to be real consistency across all channels.

This accelerated in 2020. According to business consultancy firm McKinsey, digital adoption in Europe has risen from 81% to 95% since the start of the pandemic, while the ONS reported that the UK retail sector saw five years of Ecommerce growth in just three months.

At Sabio we're also seeing how digital-native service providers are redefining CX, with customers quite rightly expecting the organisations they engage with to provide the same kind of joined-up service experiences that are offered by best practice providers.

Nothing frustrates customers more than interactions breaking down between digital channels and the contact centre.

That's why it's critical to ensure deep integration between the contact centre and digital experiences to ensure seamless engagement.

From a CX perspective, it's essential that brands are also smart about how they integrate new digital technology into their broader customer engagement strategy.

The human touch is so important, but it's also smart to recognise that it's not essential for every step of a customer journey.

At Sabio we can help you find the right balance of Artificial Intelligence and Human Intelligence for your business.

For example, customers are increasingly comfortable being directed through the initial part of their journey using a virtual assistant – particularly if it saves time. Sabio can support you in deploying virtual assistants that make the customer experience easier, or enable voice automation solutions for applications such as online payments or conversational automation.

Digital adoption in Europe has risen from 81% to 95% since the start of the pandemic

2 ACCELERATED CLOUD ADOPTION

Cloud computing enabled the creation of disruptive CX technologies - rapid innovations that make enterprise technology available for all.

Already some 62.5% of organisations either already use or have accelerated adoption of cloud technologies during the Covid-19 pandemic

and at Sabio we're expecting public cloud penetration to more than double over the next five years.

Cloud technology itself isn't new, but more and more customer service teams recognise the clear benefits of transitioning operations to the cloud. These include:

HIGHER LEVELS OF SECURITY THAN ON-PREMISE SOLUTIONS

Ensuring improved data protection

LOWER COSTS

Cloud solutions are relatively inexpensive to implement and remove the cost of physical on-premise servers

IMPROVED CX AND EMPLOYEE ENGAGEMENT

When all of your data sits on a single cloud platform, customers can expect a frictionless experience, particularly as agents will have access to more information to contextualise each interaction

GREATER AGILITY

Cloud systems enable all departments – including those located remotely to communicate effectively, improving collaboration across the whole business

BROADER INTEGRATION

Cloud CX platforms integrate directly with a range of chat, voice and messaging solutions

At Sabio we're also seeing the emergence of next generation CX platforms that are far more open than previous solutions. Expect the contact centre and CRM spaces to evolve rapidly through the adoption of emerging technologies such as Google's Contact Center AI and Twilio Flex. Here configurable cloud capabilities can be applied in an agile way to optimise human-assisted CX, and are already playing a key role in helping Sabio customers to transform CX.

3 DATA POWERS DIFFERENTIATION

One of the biggest CX challenges is not being able to combine multiple pockets of data on customers and customer behaviours from across the organisation.

The goal here is to build a complete end-to-end view of the customer and the customer journey - as they transition from digital experiences through to contact centres and engage with AI.

Customer service operations clearly need to work harder at harnessing customer data to help personalise and differentiate services, and that's one of the key reasons why enterprises are investing heavily in big data initiatives alongside AI and automation.

The reality, however, is that accessing all this data shouldn't be difficult. The technology is already in place to collect multiple data sets – Voice of the Customer, Voice of the Employee, sales figures, web analytics, virtual assistant interactions and social media queries – the list goes on. Most CX teams are keen to collect this data, but not everyone knows what to do with it!

That's where Sabio can help, drawing on your customer feedback to help build a great customer experience. Specific insight outcomes available include:

MAPPING YOUR TOP CUSTOMER JOURNEYS FOR ANALYSIS

HELP BUILD TAILORED CUSTOMER EXPERIENCE STRATEGIES FOR YOUR BUSINESS CREATE IN-DEPTH PERSONAS BASED ON DATA EVIDENCE

FINE TUNE STRATEGIES BY SETTING PRIORITIES AND EXPECTATIONS EACH QUARTER

Clearly CX operations can generate a wealth of customer data, highlighting outliers, friction points or even identifying new product or service opportunities. Get this right and this kind of structured insight can become a key differentiator.

4 AI AND AUTOMATION ADOPTION

Sabio's recent 'CX Realities 2020' white paper found that the pandemic has been a key factor in accelerating many organisations' transition to AI and Automation. Indeed, according to KPMG research, the number of CX businesses using automation has risen by 15% to 55% during this period.

With AI and automation CX teams can work to ensure that repetitive and predictable tasks are dealt with by technology.

And with AI computational power now doubling every 3.4 months, the application of AI and automation within the CX sector is set to accelerate exponentially.

We're now at the stage where it's reasonable to expect that every customer interaction will be fronted by AI in some shape or form, whether that's on a website, via a chatbot, on a speech recognition system in a contact centre or while waiting for a call to be picked up by an agent. Effectively this simplifies customer journeys by helping people to get to the answers they're looking for more quickly.

The number of CX businesses using automation has risen by 15% to 55% during this period.

This year has already seen AI-enabled capabilities becoming part of the CX portfolio, with chatbot services booming and AI-powered customer service platforms scaling to handle huge increases in online demand.

Sabio is well-placed to support this AI revolution, developing solutions that have the potential to transform customer experience – particularly where there's a requirement to deliver deployments that successfully combine AI, automation, cloud migration and customer data analytics.

5 CHANGING ROLE FOR ADVISORS

With AI and automation handling more repetitive CX functions, there will be an inevitable requirement to refocus advisors on more complex customer issues. Research firm Forrester believes that customer service contact centres will evolve into more high-touch centres, relying on super-agent roles to handle more critical interactions.

The contact centre – whether physical or remote – will continue to be the hub for those interactions, effectively becoming an even more strategic corporate asset as the value of interactions handled within the centre increases.

Forrester believes that customer service contact centres will evolve into more high-touch centres, relying on super-agent roles to handle more critical interactions.

The remaining complex customer issues and/or upsell opportunities will need to be dealt with by highly-skilled advisory agents supported by assistive, unified desktops supported by the latest generation of customer data platforms that can combine customer touch points across all channels.

This kind of real-time digital support for agents will continue to evolve, with both digital and assisted channels blending to support both customers and advisors. Customers, for example, could benefit from an accompanying digital experience while exchanging data and content, while the advisor would have access to all of a customer's interaction history and recommended next step actions.

Automation will also help agents by automating wrap-up tasks, leaving them free to focus entirely on customer engagement. And by introducing AI at the front of every action, it also opens up the opportunity for advisors to develop much deeper expertise around specific products, processes or functions. Expect there also to be new mid-tier advisor roles who will concentrate on content authoring and bot training to optimise AI performance.

SABIO - YOUR CUSTOMER EXPERIENCE PARTNER

Sabio is a full-service provider delivering CX technology, services and insights that help organisations provide brilliant customer experiences that stay brilliant.

We believe that every time someone engages with your business they are going on a journey, and we work with organisations to make sure that journey is great every time.

With over 20 years' experience in helping clients to optimise their contact centre and CX performance, Sabio specialises in cloud migration and AI/Automation, helping clients to access the benefits available from these and other cutting-edge technologies.

We combine our people and processes with best-of-breed technology and our own in-house products to provide compelling industry and segment focused CX solutions.

Our global clients are a mix of high-growth digital natives and large established enterprises seeking to transform their customer interaction and operations through digital processes, automation and business insights. Sabio partners with its customers to deliver sustainable, long-term value.
